

## Stone Making Production Line - Cone Crusher

### Stone Making Production Line

The stone making production line produced by our company can provide you with all-around technical support. The whole line consists of vibrating feeder, jaw crusher, impact crusher, vibrating screen and belt conveyor. According to specific requirements, we can combine different models together to meet various needs.

#### **1. Brief Introduction of Stone Making Production Line:**

First the raw materials are regularly conveyed into the elementary-crushing machine by the vibrating feeder, and then the belt conveyor transfers the elementary products to impact crusher for secondary crush. The secondary products will be separated into stone of different sizes by the vibrating screen. The parts not satisfying the needs will be returned to the impact crusher for further crush.

#### **2. Features of Stone Making Production Line:**

The whole line is highly automatic and the size of the finished products is even, good-shaped and can be adjustable, with high crushing ratio, low power consumption and high capacity, which is suitable for big, middle and small projects, such as road and bridge construction.
